

FIREBASE IMPLEMENTATION:

Firebase Setup

Firebase Setup

1. Create a Firebase Project:

1. Go to Firebase Console.
2. Click on **Add Project**.
3. Name your project and click **Continue**.
4. Follow the steps to create your Firebase project.
5. Once created, you will see your project dashboard.

2. Add Firebase SDK to Your Project:

For **Web Apps**:

1. From the Firebase Console, select **Web App** (</> icon).
2. Register your app with a name (e.g., "Farmers Mandi Web").
3. You'll get the Firebase SDK setup snippet. Add it to your project:
 - Insert the code in your index.html just before the closing </body> tag
 -

Firebase Authentication

Enable Authentication Providers:

1. In the Firebase Console, go to **Authentication > Sign-in Method**.
2. Enable **Email/Password**, **Google**, or any other providers you want (like Facebook or Phone).
